INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/EP2004/003103

| Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement | | | |
|---|---|---|--|
| Statement | | | |
| Novelty (N) | Claims | 1-12 | YES |
| | Claims | | NO |
| Inventive step (IS) | Claims | 1-12 | YES |
| | Claims | | NO |
| Industrial applicability (IA) | Claims | 1-12 | YES |
| | Claims | | NO |
| | Citations and explosions Statement Novelty (N) Inventive step (IS) | Statement Novelty (N) Claims Claims Inventive step (IS) Claims Claims Claims Claims Claims Claims | Citations and explanations supporting such statement Statement Novelty (N) Claims Claims Inventive step (IS) Claims Claims Industrial applicability (IA) Claims 1-12 Claims 1-12 |

2. Citations and explanations (Rule 70.7)

Reference is made to the documents cited in the search report. The numbering relates to the sequence in which they are listed therein.

D1 and D2 disclose catalyst systems consisting of Ni(0), tertiary phosphorus compounds (D1: phosphane, D2: phosphinite), hydrocarbylaluminium chlorides and heteroorganic aluminium compounds such as dialkylaluminium alcoholates (D1: column 2, lines 15-68, examples 1, 3, 4, 6); D2: column 3, line 60 - column 5, line 68, examples 1-17). The catalysts are used to prepare dienes; the use thereof for hydrocyanation is not mentioned.

D1 and D2 differ from the current application by virtue of the phosphorus compounds b). The use of phosphites and phosphonites is not described.

Claims 1-12 are therefore novel over D1 and D2. Since D1 and D2 do not describe use in hydrocyanation reactions, those documents are not relevant to the assessment of inventive step (PCT Article 33(3)).

International application No.
PCT/EP2004/003103

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

D3 claims the hydrocyanation of [2,2,1]-5-heptene-2-carbonitrile using a catalyst system that contains Ni(0), a trivalent phosphorus compound and a Lewis acid (column 2, line 12 - column 3, line 36). Aluminium isopropoxide and titanium isopropoxide can act as Lewis acids (column 3, line 59).

D3 is the closest prior art. The application differs from D3 in that a further Lewis acid is used in addition to aluminium isopropoxide or titanium isopropoxide. The applicant has shown that the reaction selectivity is improved by the combination of two Lewis acids.

Novelty and inventive step can therefore be acknowledged with respect to claims 1-12 (PCT Article 33(2) and (3)).

Claims 1-12 are industrially applicable (PCT Article 33(4)).
